B happy with your
NEW removable partial denture

Ask your dentist about the benefits...

...of having your partial denture created using WIRONIUM®. The patented Cobalt Chrome dental alloy.

If you have lost some of your natural dentition it is important that you take good care of your remaining teeth and replace those that are missing for the following reasons:

- **Without mutual support of neighbouring dentition your remaining teeth may rotate, tilt or move into unsightly or awkward positions**
- **Restores your appearance and importantly your smile**
- **Helps speech**
- **Restores your ability to eat comfortably**

A partial denture may be made from plastic or a combination of plastic and metal alloy base. Whilst plastic is a cheaper option a partial denture made from an alloy such as WIRONIUM® offers significant advantages to the denture wearer:

- **Far less bulky than plastic**
- **Lighter and more comfortable**
- **Clasps and precision attachments can be used to secure the denture in place**
- **Supported by your remaining teeth**

WIRONIUM® alloy clasp for superior retention

B
Creative

INTERNATIONAL
WIRONIUM® CIRCLE

“First class dental work using premium quality materials”

Why should you choose a partial denture made from WIRONIUM®?

- **Lightweight designs which make the restoration less noticeable**
- **Thinner frameworks that enhance a comfortable fit**
- **Superior retention. The special nitrogen-enriched WIRONIUM® alloy will allow you to remove it over and over while it maintains its retention and secure fit for many years.**

Laboratory model analysis

The WIRONIUM® brand indicates to you, the patient, that your partial denture has been fabricated to the highest standard using the latest know-how, materials and processing equipment. WIRONIUM® alloy partial dentures can only be supplied to your dentist by Dental Laboratories who are members of the B-Creative IWC (INTERNATIONAL WIRONIUM® CIRCLE). This B-Creative IWC is a worldwide association of leading dental laboratories with a common aim: First class dental work using premium quality materials.
